

OUTLAND ADVENTURES

DATABASE CASE STUDY

*REBECCA ESSENBURG
&
DANIEL FRYER*

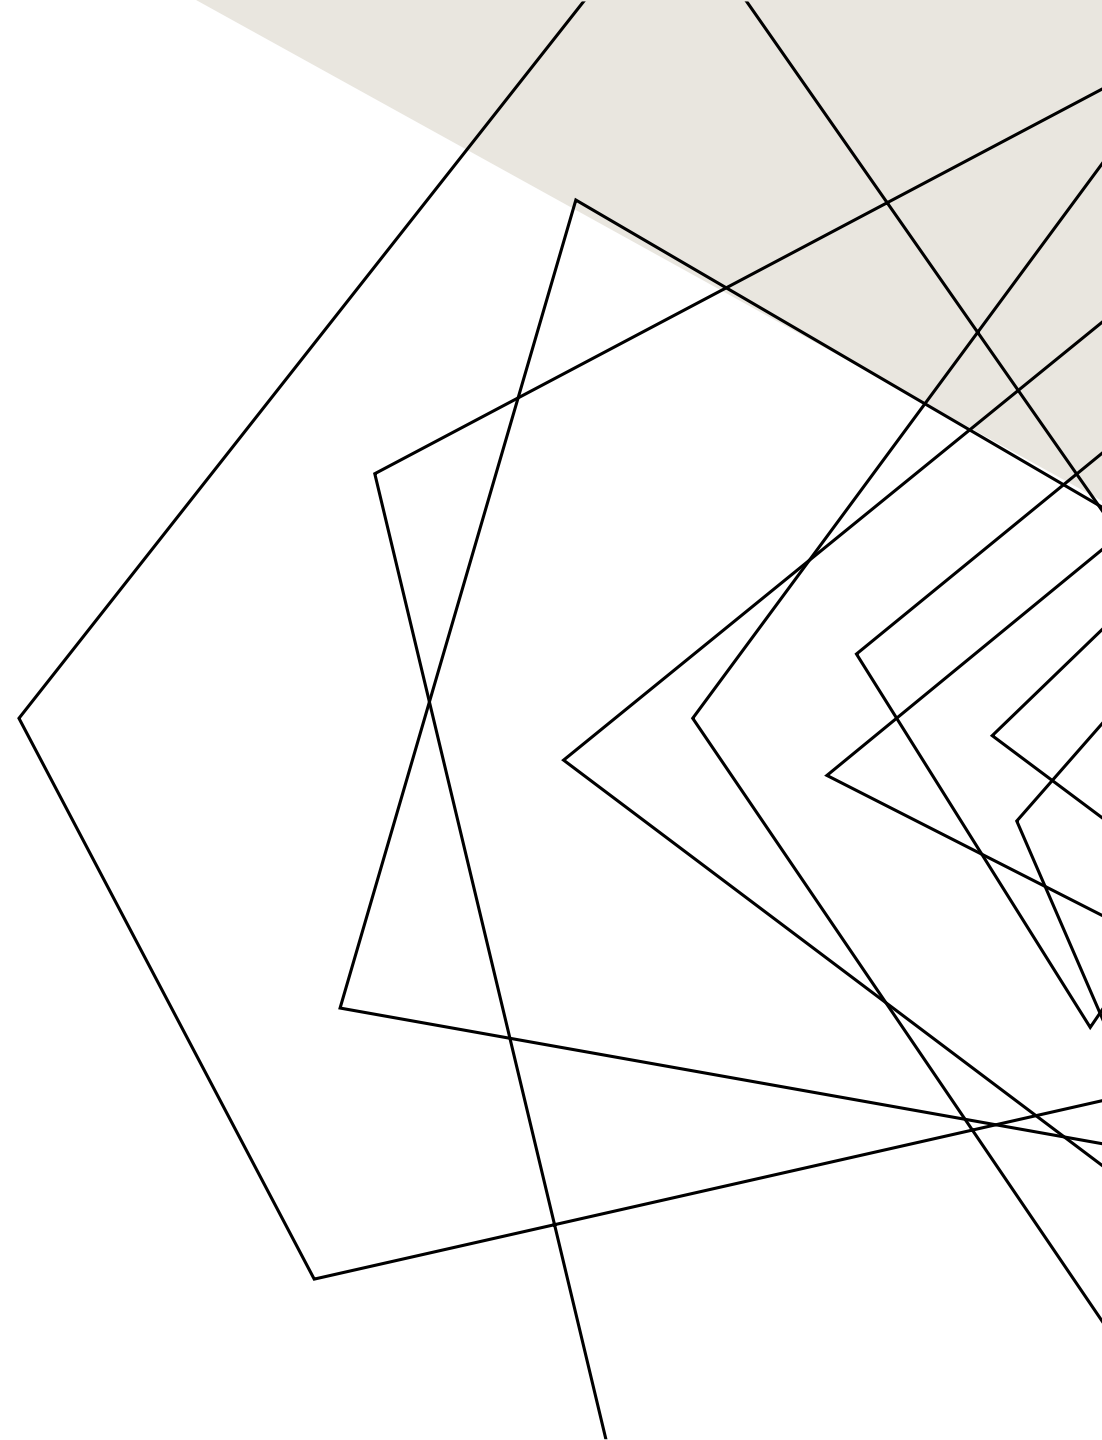

CASE INTRODUCTION

This case study was about two people who enjoyed the outdoors. After running a successful business by taking people on outdoor adventures around the world they wanted to reflect on ways they could optimize their operations. They have two guides, a marketing director, a supply manager, and an ecommerce developer. The three questions they would like to have answered:

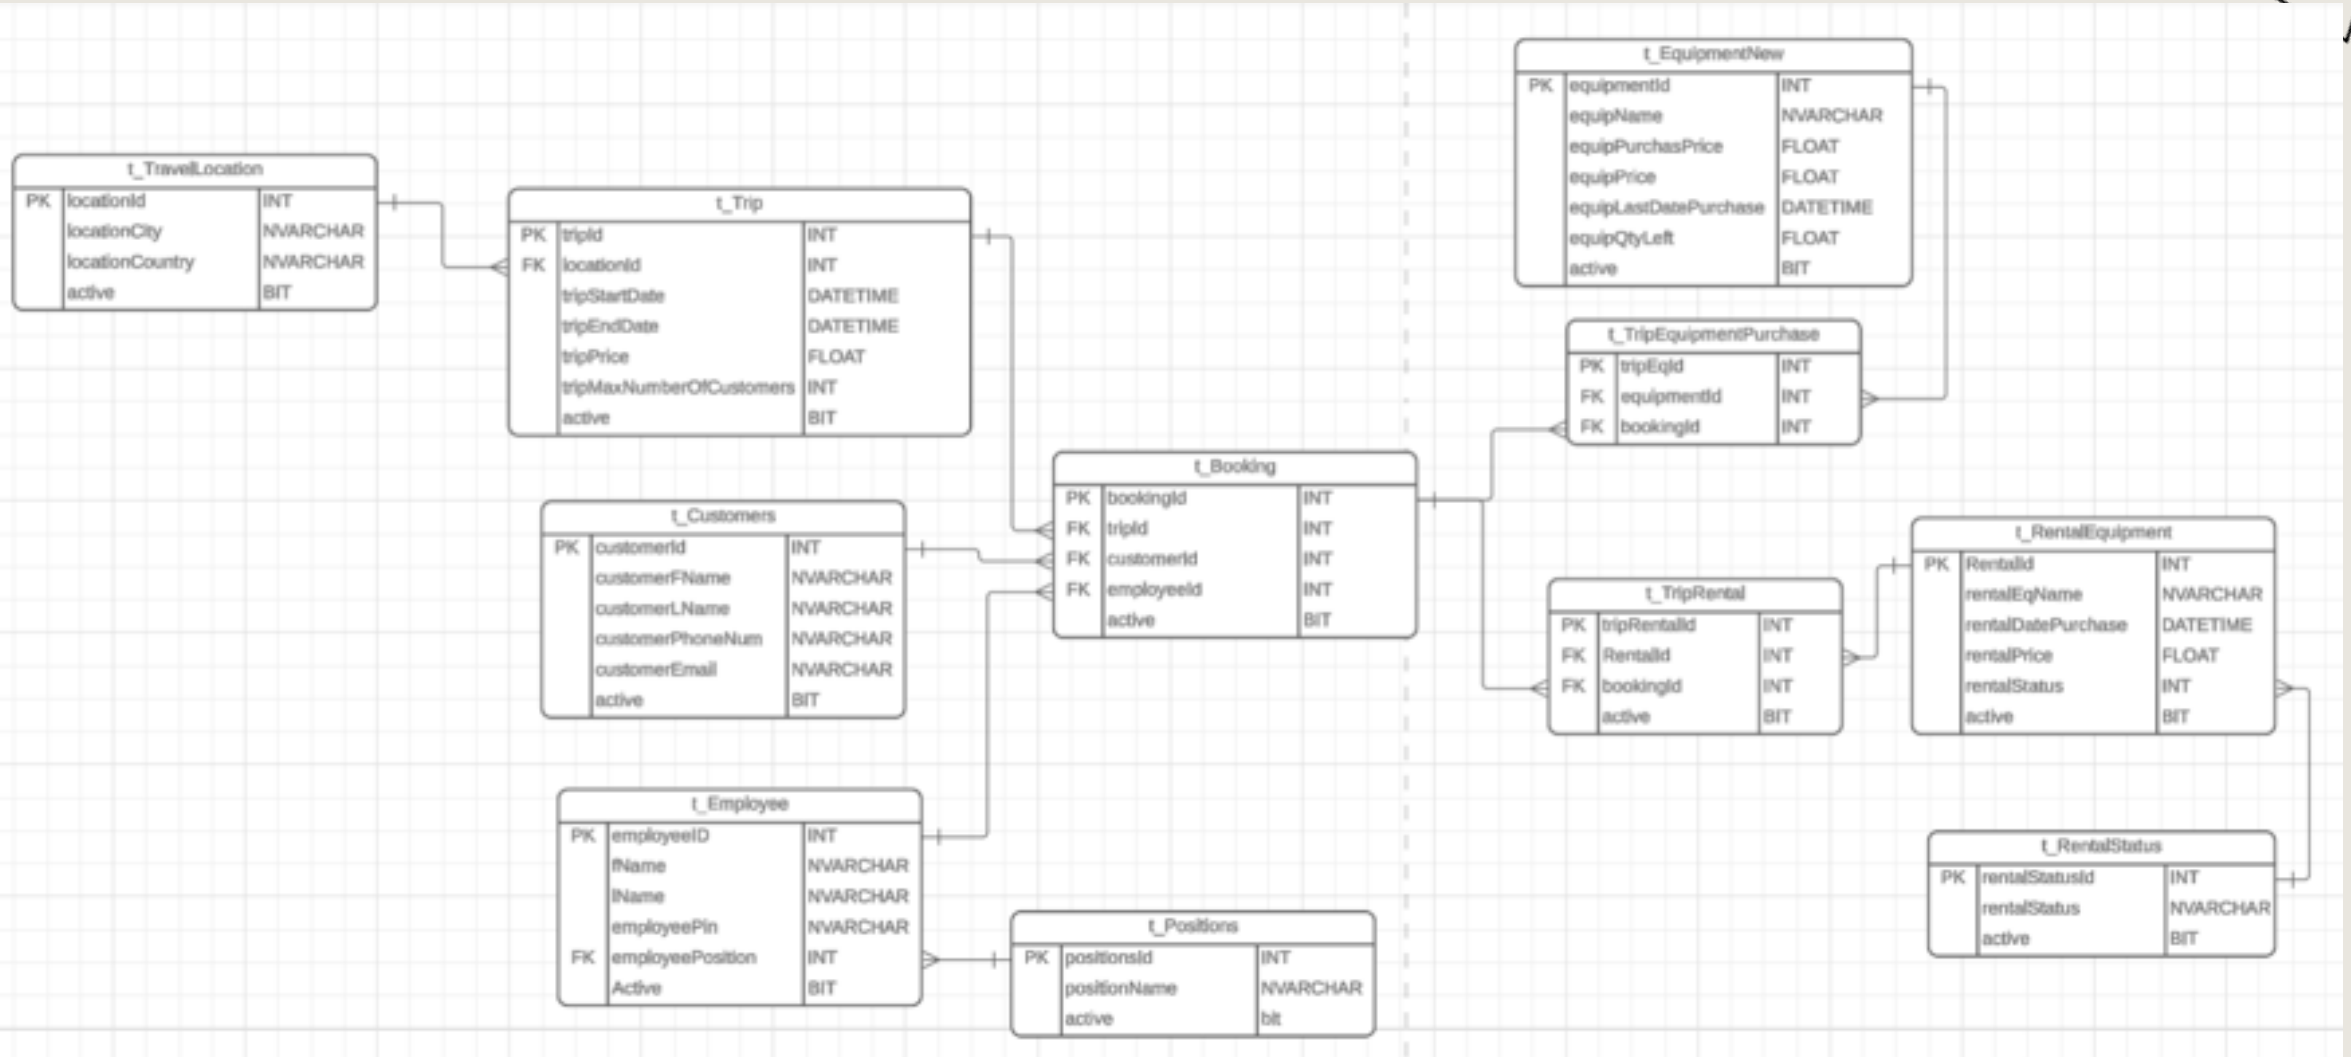

- 1. Do enough customers buy equipment to keep equipment sales?*
- 2. Are there any inventory items that are over five years old?*
- 3. Is there any one region (Africa, Asia, or Southern Europe) that has a downward trend in bookings?*

GROUP 4'S APPROACH

For this case study, we started from the heart of the information – the trips themselves – and branched outward to include as much business-relevant data as we could within our system. This database both answers the owner's pressing questions while retaining important company and customer information.

ENTITY RELATIONSHIP DIAGRAM

DO ENOUGH CUSTOMERS BUY EQUIPMENT TO KEEP EQUIPMENT SALES?

--Customers Buying Equipment--

Customer	Total Purchases	Total Sales
Mark Hanson	4	677.96
Billy Bob	1	125.99
Jill Hanson	1	125.99

--Equipment Inventory Purchased--

Item	Total Items Purchased	Total Sales Amount
2 Person Tent	1	249.99
First Aid Kit	4	503.96
Camp Stove	1	175.99

The first report allows the business owners to see which customers have purchased (not rented) equipment for their trips. They can see customers by name, how many items each customer has purchased, as well as the total amount spent on these items to make their decision on whether equipment sales are providing enough profit overall. The second report is more optional, but it allows the business owners to see how much of each individual item was purchased if they would like to see which inventory is the least popular.

ARE THERE ANY INVENTORY ITEMS THAT ARE OVER FIVE YEARS OLD?

```
--Rental Equipment > 5 Years Old--
```

Item ID	Equipment	Date Added to Inventory	Rental Status
2	Hydration Bladder	2020-01-01 00:00:00	Booked
6	Sleeping Bag	2020-07-07 00:00:00	Last Use

```
--New Equipment > 5 Years Old--
```

Item ID	Equipment	Date Added to Inventory
4	Camp Stove	2020-11-03 00:00:00

There are two reports to answer this question, one which displays rentable equipment and one which displays new equipment. These tables only display items that have been in inventory for over 5 years from the current date, as well as their item ID to distinguish that specific item from others of its kind for easy removal/inspection. It will not display any items newer than 5 years old.

IS THERE ANY ONE REGION (AFRICA, ASIA, OR SOUTHERN EUROPE) THAT HAS A DOWNWARD TREND IN BOOKINGS?

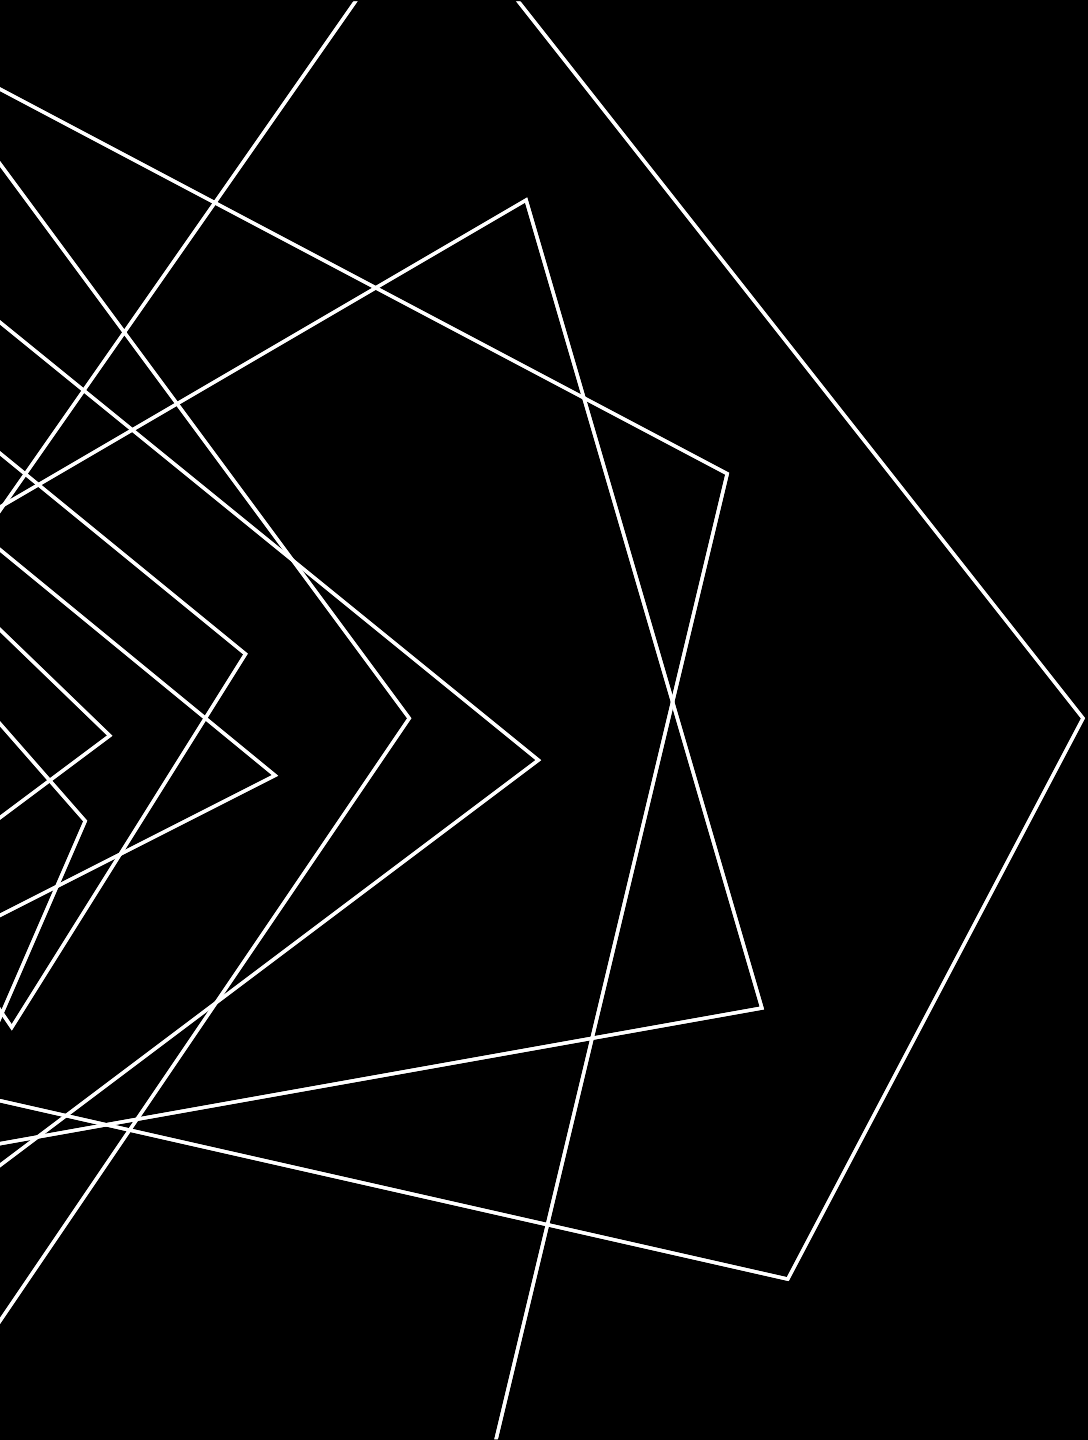

```
--Bookings by Region--
```

Region	TotalBookings
Asia	1
Southern Europe	1
Africa	6

This question can be answered by a single report. Each booking has been labeled by which region it was in, and the total number of bookings are added together for each region.

CASE ASSUMPTIONS

- Customers would have to register before booking. No guest accounts.
- Purchased and rented equipment come from two separate inventories. Rented equipment cannot be sold for purchase, and vice versa.
- A person can purchase and/or rent equipment for each trip.
- Trips don't include equipment; customers must purchase or rent the equipment.
- Only a maximum numbers of customers can be signed up for each trip.
- An employee can only be on one trip at a time.

THANK YOU
